

- **IN JAVA EVERY DATATYPE HAVE CLASS**
- **THAT CLASS CONTAINS ALL ABOUT DATATYPE**
- **FOR EXAMPLE (int datatype) having class called Integer . IT CONTAINS ALL ABOUT THAT DATATYPE FOR EXAMPLE : MIN VALUE;MAX VALUE AND MANY MORER.....**

EXAMPLE CODE—

```
package datasizerange;

public class DataSizeRange {

    public static void main(String[] args) {

        /*System.out.println("Int Min: "+Integer.MIN_VALUE);
        System.out.println("Int Max: "+Integer.MAX_VALUE);
        System.out.println("Int Bytes :"+Integer.BYTES);*/

        /*System.out.println("Byte Min: "+Byte.MIN_VALUE);
        System.out.println("Byte Max: "+Byte.MAX_VALUE);
        System.out.println("Byte Bytes :"+Byte.BYTES);*/

        System.out.println("FLoat Min: "+Float.MIN_VALUE);
        System.out.println("Float Max: "+Float.MAX_VALUE);
        System.out.println("Float Bytes :"+Float.BYTES);
    }
}
```
